Maule's Celery

Count on about 400 plants to a packet of seed, about 7,500 plants per ounce or quarter pound per acre. For home use celery is often grown in double rows, 10 inches apart, and plants 6 inches apart in each row, allowing 4 feet of space before setting out another double row. Maule's Onion Sets

Culture—Onion sets should be planted as early in the Spring as the ground can be worked. Set the onions in the ground lightly (do not cover) in shallow furrows, 12 to 18 inches apart and about 2 inches apart in the row. Young onions may be had in five weeks. By planting sets, onions can be produced for market or household use four to six weeks earlier than can be had from seed. Onions from sets are usually harvested in the locality of Philadelphia in July, which allows the sowing of another crop on the same ground the same season. A pound of onion sets will plant a row about 100 feet long. Use 250 pounds to 325 pounds to an acre.

Maule's Lawn Grass

891 *Maule's Extra Lawn Grass Mixture*

A Beautiful, Smooth, Low Growing Evergreen Grass for the Yard or Lawn

This mixture will insure a beautiful, compact, evergreen sod on any lawn where the essential requirements of grass culture have been complied with. Its component parts are the grasses peculiarly adapted to lawns and yards, including choice selected strains of Kentucky Blue, etc., along with the best known creeping or sod forming sorts. We have included a little white clover in the mixture, regarding it as essential. Full provision is made for a succession of growth, so that there shall be no break in the richness of the verdure from spring until autumn, and experience proves that Maule's Extra Lawn Grass Mixture is now perfect. Nothing better can be purchased on the American market. For those that wish this mixture without white clover we can supply it at the same prices but in ordering please mention you want it without clover.

Grass seed can be sown any time between April and September.

A Rapid Growing Velvety Green Grass

This mixture is for producing an immediate greensward that will be followed by a good, permanent sod. It is especially to be recommended for late spring seeding, without a nurse crop. For early seeding we would rather use Maule's Extra Lawn Grass Mixture, but after May 1st (in the latitude of Philadelphia) we would much prefer this one. It will make rapid growth, and will be ready to cut two weeks in advance of any other mixture which we offer; nor is it lacking in permanence.

It will produce a sod that is absolutely proof against heat or drought, and that cannot be injured by cold. The grasses produce strong, spreading roots, thus preventing heavy rains from washing them out; will withstand exposure, thrives on shallow soils, and at the same time produces a rich, velvety green turf throughout the season.

Maule's Three Permanent Pasture Mixtures

Best Adapted for Producing an Abundant Hay Crop or for Pasturage

It is true beyond all question that a mixture of grasses produces a better mowing field and subsequent permanent pasture than a mere combination of timothy and clovers. The former will last five times as long as the latter. Timothy "runs out" in a couple of years or so, while a good permanent pasture will last ten or even twenty years. This has been frequently and forcibly shown by experience. In preparing the permanent pasture grass mixtures we employ mainly Kentucky Blue, Timothy, English or Perennial Rye, Italian Rye, Red Top or Herd, Orchard, Meadow Fescue or English Blue, Canadian Blue and Crested Dogstail.

Clovers used in mixtures are Red, Alsike and White. We vary the proportions to suit the different soils.

Maule's Permanent Pasture Mixture for Light and Sandy Soils.—Use at the rate of 40 pounds per acre.

Maule's Permanent Pasture Mixture for Average Soils.—For general use everywhere. Sow at the rate of 40 pounds per acre.

Maule's Permanent Pasture Mixture for Heavy Soils.—Use at the rate of 40 pounds per acre.

Flowers for Different Purposes and Situations

The lists below were compiled for your convenience so that you can readily select proper varieties for different purposes or locations. These lists are by no means complete, but merely suggestive. Each variety, throughout the catalog, is clearly described; height, growing habits and for what purposes they are best suited. **Directions how to plant are printed on every package of Maule's Flower Seeds.**

Classification of Flowers

Flowers are divided into three classes—Annuals, Biennials and Perennials. Each class is described as follows:

Hardy Annuals. Easily raised and suitable for many purposes; excellent for cutting; invaluable for bedding, some for color, others for foliage effect. They will always be popular with those who want quick results with the least expenditure of time and money. Seed may be started in the open ground in early spring or sown indoors for earlier effect. Plants will flower and die in the one season.

Half Hardy Annuals. Seeds should be sown in boxes in the house or in hot-beds during March or April and the plants set out in the open ground when the trees come into leaf. They will flower for the one season and die.

Hardy Biennials. Sow seed as you would the hardy annuals. The plants will not bloom until the following year, after which they die.

Half Hardy Biennials. Seeds should be sown as you would the half hardy annuals. The plants require protection during the winter. They will bloom and die the following season.

Hardy Perennials. Seeds may be sown in early spring, or during July and August to produce plants that will flower the next season, and continue to bloom each succeeding year. Seed of some hardy perennials, if sown very early, will produce plants that will bloom the same season. It is unnecessary to give protection to these plants during the winter, but it will prove beneficial to the plants if a covering of leaves, litter or strawy manure is provided. A hardy bed or border, when once established, requires practically no attention and will, if varieties have been properly selected, provide an abundance of flowers from early spring until frost.

Half Hardy Perennials. Sow seed as you would the half hardy annuals. If plants are set out in the open ground they must be lifted before frost, potted up and taken in the house during the winter.

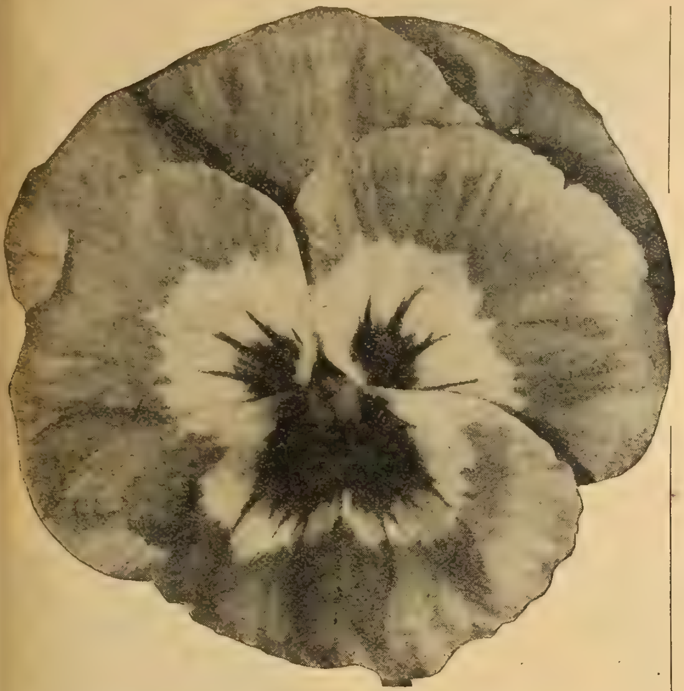
Maule's Giant Pansies (Heartsease) Hardy Biennial

FOR many years, in fact ever since we have been in business, we have given particular attention to Pansy seeds. We assure you that our strains of Pansies are as good as can be found anywhere in the world. Pansies demand good soil, thriving best in a cool, moist but well drained position. Do not plant Pansies in the shade of a tree or building, as this causes straggly plants with very few blooms. Seeds sown in April or May will produce blooming plants the last of June, which will continue flowering until the end of the season. For early spring blooming sow seeds in August and give plants protection during the winter. We know that the results obtained from our Pansy seeds have been so remarkable that this is the reason the demand for this beautiful and popular flower increases with us so much every year.



1614 Maule's Prize Mixed Giant Pansies

A carefully prepared mixture of all the richest, most exquisite, and largest Pansies known.

Look for blossoms 2½ to 3½ inches across, of perfect texture, embracing an endless variety of colors. Year by year we watch the production of American and European specialists and secure everything truly meritorious for incorporation into our Prize Mixture.

Pansy seed is a very high priced commodity, and it is next to impossible for the average flower lover to buy all the new sorts on the market. All the types that are really desirable will be found in Maule's Prize Mixture, which is largely grown for exhibition.

Pkt. 25c; 1/16 oz. 75c; ⅛ oz. $1.25; ¼ oz. $2.25; ½ oz. $4.25; oz. $8.00

Hardy Perennial Phlox

Well developed plants sent direct from our Nursery

Perennial Phlox succeeds in almost any soil, but, of course, extra care in preparing and enriching the soil and watering plants in dry weather will result in better plants and flowers. If the first spikes of bloom which usually appear in July and August, are removed as soon as over, the plants will produce a second supply of flowers, continuing the display until late in the autumn. They are perfectly hardy, becoming larger and more beautiful each year.

Maule's Hardy Everblooming Roses

Widely known as "Monthly Roses"

2-Year-Old Heavy, Healthy Field-Grown Plants

The so-called Everblooming Roses are the **Hybrid Teas** and **the Teas.** They do not bloom all the time, but if kept pruned and cultivated, one crop of flowers succeeds another at brief intervals throughout the summer.

They are among the most beautiful of all Roses. Although hardy, they do best if given some protection in winter. A light covering of strawy manure is all that is necessary; or an equally efficient protection may be obtained by heaping soil, say, eight inches deep about each plant—removing same, of course, in early spring.

We offer below, in our opinion, a list of the most popular varieties—only such roses as have proved their worth in gardens throughout the country. They will do well in a great variety of soils and if properly cared for, will bloom the first year.

Nine Select Everblooming Roses

90N08 Angele Pernet. Distinct in color, a rich, vivid, coppery-orange-yellow in which it is not approached by any other Rose. Its buds are long, opening to semi-double cupped fragrant flowers. An indispensable variety that you will love for its wonderful color.

90N09 Briarcliff. Fragrant and long lasting; large, pointed buds, and double, high-centered blooms of brilliant rose pink. Stem stiff and strong; foliage resistant to disease. Free flowering.

90N10 Dame Edith Helen. The immense flowers are composed of broad petals which curl back prettily forming a glorious long pointed bud and a full double flower which is beautiful in every stage of development. Color a brilliant clear pink; sweet-scented.

90N12 Etoile de Holland. A strong vigorous healthy grower and free bloomer which like the popular Radiance Roses, improves in vigor from year to year. It is a continuous bloomer with large, moderately double flowers that are particularly attractive. In color a brilliant crimson red.

90N33 Kaiserin Augusta Victoria. The grandest white rose in cultivation. A continuous bloomer, producing quantities of snow-white flowers tinted with just enough lemon in the center to relieve the white. Remarkably fragrant.

90N41 Lady Ashtown. One of the best garden Roses and a fine long lasting cut flower. Flowers large, sweetly scented, of a pleasing carmine-pink shading to a golden-yellow base.

90N76 Rev. F. Page Roberts. A Rose of remarkable beauty both in form and color. The long pointed buds are of a coppery-red stained red on the outside and open to good full double fragrant flowers of a golden-yellow particularly high colored in late summer and fall.

90N91 Talisman. The Rose which was awarded more Gold Medals than an other American Rose. It is a most remarkable piece of coloring; a combination of shadings of gold, apricot, yellow, deep pink and old rose. The bud is long, well formed and develops into full double flowers. The plant is a strong grower, and free flowering.

90N45 Los Angeles Improved. (**Willowmere.**) This splendid Rose is of a coral-red; suffused with carmine in the bud state, and opens to a large, full, handsome flower of a rich shrimp-pink, shaded yellow in the center and flushed carmine-pink towards the edges.

90N71 Radiance. One of the most gorgeous American sorts as yet introduced. The large, finely formed flowers are brilliant carmine-pink with salmon-pink and yellow shadings at the base of the petals.

90N85 Souv. De Claudius Pernet. The most dependable golden-yellow garden rose of today. The color is a most striking sunflower-yellow; deeper in the center, without any color blending. It is equally charming in bud, or while opening, and after fully blooming
